## Chemical Bulk & Day Tank Level Measurement

The storage and transfer of high volume chemicals requires the use of bulk storage and day tanks typically monitored via a PLC. Traditionally, users have been forced to package various level devices in order to satisfy their diverse large to small tank requirements. Flowline non-contact ultrasonic level transmitters are offered in five optimized ranges (10m, 8m, 5m, 3m, 1m) and two enclosure types. It's chemical bulk and day tank level made simple!

[LU14](#) with 32' Range  
[LU13](#) with 26' Range  
[LU11](#) with 16' Range  
[LU12](#) with 10' Range  
[LU05](#) with 4' Range

The [LU13](#) is applied in the large bulk storage tank, the [LU11](#) is applied in the two medium sized storage tanks, and the [LU12](#) is applied in the three small day tanks.
