FLOWLINE

LEVEL SOLUTION

Chemical Distributor Tank Level Measurement

Dairy farms consume large quantities of chemicals for cleaning and neutralization processes such as sodium hydroxide. Caustic crystallizes causing contact type level sensors to fail and/or require maintenance. Chemical distributors in rural areas supply dairy farmers from their bulk storage tanks via IBC deliveries. Flowline ultrasonic transmitters are the non-contact level measurement solution for chemical distributor inventory monitoring applications. It's distributor level made simple!

LU11 Ultrasonic Level Transmitter with 16' Range

The LU11 is mounted in a 2" tank adapter and connected to the PLC for inventory monitoring. The tank is covered in foam insulation due to the freezing winter temperatures.
